GENERAL INFORMATION

The Twelfth International Workshop on Active-Matrix Liquid-Crystal Displays (AM-LCD '05) will be held from July 6 (Wednesday) to 8 (Friday), 2005 at KANAZAWA BUNKA HALL, Kanazawa, Japan.

This international workshop was established in 1994 for presenting the latest research and development of AM-LCD technologies and their applications. For the 2005 workshop, in addition to AM-LCD technology, the scope is extended to active-matrix organic light-emitting-diode (AM-OLED) displays, thin film devices, and new application fields of TFT. This year's three-day workshop will feature 89 papers, including invited papers and additional late-news papers. Two symposia, "Ultimate Low-Temperature TFT Process" and "High Quality Display", and also a special session on "Organic TFT for Advanced Display" are scheduled.

We hope you will enjoy this exciting workshop.

SYMPOSIA

In addition to the regular sessions, two symposia, "Ultimate Low-Temperature TFT Process" and "High Quality Display", are scheduled. The former introduces various new technologies, from materials to device applications, to realize future display such as flexible display. The latter proposes new technologies in plasma, projectors and liquid crystal displays for TV applications. Invited speakers will present state-of-the-art topics.

SPECIAL SESSION

A special session, "Organic TFT for Advanced Display", is planned. Recently, organic TFT is intensively researched and developed, because it is the most promising and emerging technologies. Invited speakers will present the latest cutting-edge topics.
